Meet The 6 Bezel Molds

Diana

Lonna

Charlotte

Because some shapes from one CaBEZEL mold pair so nicely with shapes of the other molds I have grouped them together and given a discount when you purchase the sets of 3 or 6 in this CaBEZEL series.

Meet The 6 Bezel Molds

Ashley

Louise

Annie

Each CaBEZEL mold comes with a companion template for cutting the inserts.

To help get you off to a great start, I'm including a printed, full colour page of an original pattern to use inside your baked bezels. **This is for a limited time only!** See more about the papers below.

Meet the templates that inspired the CaBEZEL molds.....

SOME HELP FROM SCULPEY TOOLS

These Ca**BEZEL** molds were born as companions to the Sculpey Jewelry Mold Templates.

As you know, we sell Sculpey products at Shades of Clay and after seeing that Sculpey used some of my favourite shapes for their templates, I was excited to get started making some jewelry. Unfortunately, I was left wanting more.

I mean, what was I supposed to do with the shapes cut from clay?

They seemed a little... well, flat.

I immediately had the idea to create companion bezel molds.

Now when I use one of the templates to cut the shape from clay or paper, I have a frame to put them in!

I've thought of so many ways to use these new CaBEZEL molds!

I hope you'll agree that this is a match made in heaven.... kind 'a like peanut butter and chocolate.

Master the use of the CaBezel Jewelry Molds and get beautiful results consistently.

Introducing the CaBEZELS

Unlike my other CaBezel molds, there isn't a second part that helps you create a rounded cabochon.

Instead, you're going to create a flat insert by using the provided template as a cutting guide!

Use the template with your favourite canes, veneers or paper!

That's right....I'm going to show you how you can use beautiful paper for inserts!

Tip: If you aren't familiar with the other types of CaBezel Molds you can find out more [here](#).

Endless possibilities

buttons
purse accessories
home decor
journal covers
fridge magnets
pins
and of course jewelry!

It's so simple to create original, wearable art!

First, make some bezels from clay, bake them and set them aside.

Now, use the plastic template (included) to cut a perfect fitting insert from sheeted polymer clay or paper.

Meet the papers..... there are 6 designs

I had fun creating some papers for these CaBEZELS.

The bottom half is a mirror image of the top half so you can create perfectly matching, mirror image earrings if desired.

Of course you can also use pages from your journals or scrapbooks.

Gelli prints work well too.

How about using some of your favourite texture stamps with ink to make your own papers?

The possibilities are endless.

BONUS #1

With every set of 3 or 6 purchased, you will receive a link to those designs so you can download and print as many pages as you want to!

Who doesn't want some original artwork to use in their jewelry!

BONUS #2

For a limited time you'll get a 8.5" X 11", full colour print-out with every CaBEZEL mold purchased.

Printed using a laser-toner printer. This means the printer used powder, not liquid so these shouldn't bleed, but papers printed using an inkjet printer will.

[Buy now](#)

Please note: The above examples of paper designs were still a work in progress at the time this PDF was created. The most accurate versions will be shown on the CaBEZEL product pages at Shades of Clay.

The paper designs are pre-chosen for each CaBEZEL mold

More on using papers.....

Sealing the paper

Before you begin, it's a good idea to seal your paper designs.

Not only will it make the paper stronger, it will ensure that there won't be any surprise bleeding later on if you decide to coat it with resin or liquid clay etc.

Also, if you want to trace the template shapes with pencil before you cut, it should allow you to erase any leftover pencil lines.

There are several options for sealing paper:

acrylic medium, white glue or Mod Podge etc., but much of it depends on how you intend to finish your pieces.

There are various ways to finish off your piece depending on the method used for the insert.

You may want to seal with a clear coat, or if you're OK with re-baking them, you can consider Liquid clay or even Cernit Glaze.

If you want a domed effect, you can use Triple Thick or ArtResin to finish them off.

I suggest starting with what you're comfortable with and do a few tests before committing to creating your masterpiece as I can't possibly cover all of the product scenerios with you.

[Buy now](#)

Tip: Always keep a dedicated, clean brush for applying a clear sealer so that no colour shows up from a previous use.

Watch for more ideas and tutorials to help you use all of the [CaBezel Jewelry Molds](#).
